

Prof. Nadeem Akhtar
Head of Department
Paediatric and Neonatal surgery
Dr. Fatima Al Zahra
Consultant Paediatric and Neonatal surgeon

CARE INSTRUCTIONS

- Keep the baby clothed and warm as routine. No need to refrain from diaper.
- Start Sitz bath (immersing the lower half of body in container filled with lukewarm water) twice a day for 5 minutes. To be done till plastibell comes off.
- Give panadol drops (half dropper) if baby seems to be agitated or in pain. Ensure not to repeat before 8 hours.
- Common concerns can be infection, bleeding, undercircumcision. In given case issues can be addressed on follow up visit or through call on given numbers.
- If plastibell doesnt come off in 10 days it would be manually removed.
- After plastibell comes off the foreskin should be retracted in every bath time.
- In case of ooze or bleeding immediately contact on given number.
