

June 2026

NEWSLETTER

Transforming Lives Through Pediatric Surgery.

MESSAGE FROM THE CEO

June marked another successful month for **Child Surgical Foundation**. Our team continued to deliver comprehensive neonatal and pediatric surgical care while advancing our **academic, rehabilitation, and community** outreach initiatives.

The growing number of referrals from **across Pakistan** reflects the trust families place in our specialized services. Every successful surgery represents renewed hope and a healthier future for a child and their family.

Prof. Nadeem Akhtar
CEO Child Surgical Foundation

MESSAGE FROM THE DIRECTOR

June highlighted the exceptional commitment of our multidisciplinary team. From managing **complex neonatal emergencies** to performing hundreds of day-care procedures and advanced reconstructive surgeries, our focus remains on delivering safe, affordable, and high-quality pediatric surgical care.

Dr. Gauri Shankar Pandit
Director Child Surgical Foundation

SURGICAL SERVICES – JUNE 2026

MAJOR SURGICAL PROCEDURES 120+

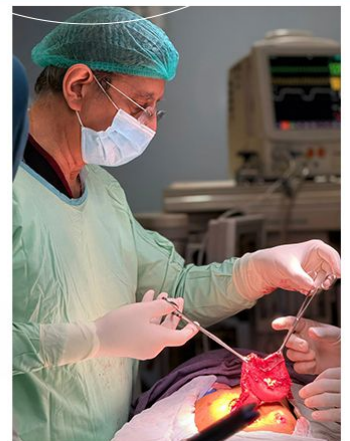

Advanced surgeries included exploratory laparotomy, tumor excision, stoma reversal, Ladd's procedure, EA/TEF repair, neonatal intestinal obstruction surgery, gastrointestinal and urological reconstruction, and abdominal wall reconstruction.

DAY-CARE PROCEDURES 390+

Our Day Surgery Unit successfully performed herniotomy, hydrocele ligation, orchidopexy, distal hypospadias repair, tongue-tie release, rectal biopsy, meatotomy, and umbilical hernia repair, enabling safe same-day discharge.

CIRCUMCISION PROGRAM 270+

All procedures were performed under strict aseptic protocols, with comprehensive postoperative counseling provided to parents for optimal recovery.

HYPOSPADIAS RECONSTRUCTION 210+

Our surgeons successfully completed distal, mid-penile, and proximal repairs, including chordee correction and complex redo and two-stage reconstructions, with individualized planning and structured follow-up.

COLORECTAL SURGERY 9 MAJOR CASES

Specialized procedures included PSARP, Hirschsprung pull-through surgery, stoma closure, anoplasty, and management of complex anorectal malformations.

NEONATAL SURGERY 34 NEWBORNS

Life-saving surgical care was provided for newborns with EA/TEF, intestinal atresia, malrotation with volvulus, anorectal malformations, intestinal obstruction, and congenital abdominal wall defects.

SUCCESS STORY OF THE MONTH

ENDING EIGHT YEARS OF PAIN

An **8-year-old** with years of undiagnosed chronic abdominal pain was found to have intestinal malrotation. A Ladd's procedure resolved the pain entirely, with normal feeding and activity restored — highlighting the value of careful diagnosis in rare congenital conditions.

REHABILITATION CENTRE

80+ children received physiotherapy, occupational therapy, speech therapy, developmental assessment, and parent counseling this month.

ACADEMIC DEVELOPMENT

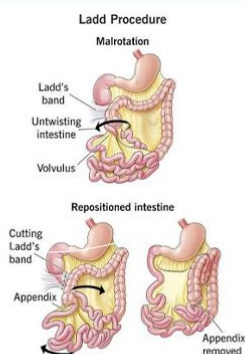

Preparations continue for our upcoming academic workshop, bringing together surgeons, neonatologists, nurses, and trainees for hands-on, evidence-based learning.

DIGITAL HEALTH AWARENESS

Daily social media posts covered birth defects, hypospadias, hernia, undescended testis, neonatal emergencies, circumcision care, and the importance of early diagnosis.

LOOKING AHEAD

In July, CSF will expand neonatal and pediatric services, strengthen the hypospadias and colorectal programs, grow rehabilitation and academic offerings, and continue delivering affordable, compassionate care.

OUR MISSION: "EVERY CHILD DESERVES SAFE, SPECIALIZED, AND COMPASSIONATE SURGICAL CARE."
